The most complete & user-friendly decentralized hub for new crypto projects.

SANDWICH

DEC 2021

Presented by
Sandwich Network

Summary

01 Introduction

Sandwich Network is the definite hub to start a cryptocurrency project. User-friendly and permissionless access to anyone.

Sandwich is truly decentralized and non-custodial so any user that connects with a Web3 wallet can mint, launch, lock and use all future Dapps.

At **Sandwich Network** we believe in the Amazon strategy. Not divide, but conquer.

Consumers are willing to give up almost everything for convenience. We aim to become the 'Google Hub' for new projects in the decentralized World of blockchain.

Therefore, we are building an extensive ecosystem of DeFi apps. All under one roof.

So everything you will ever need to trade tokens on decentralized exchanges, we offer it.

The Problem
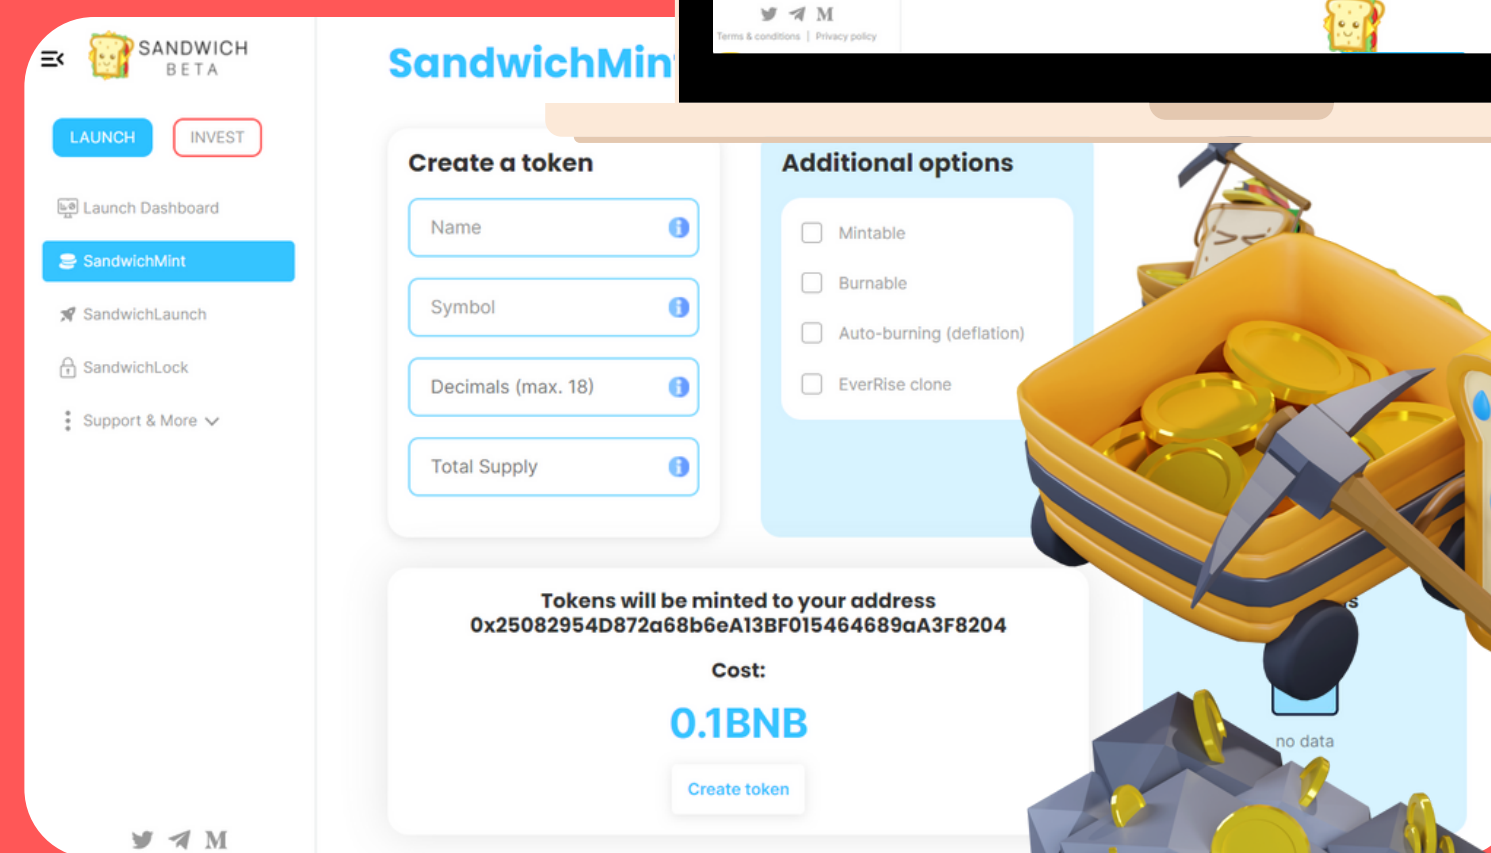

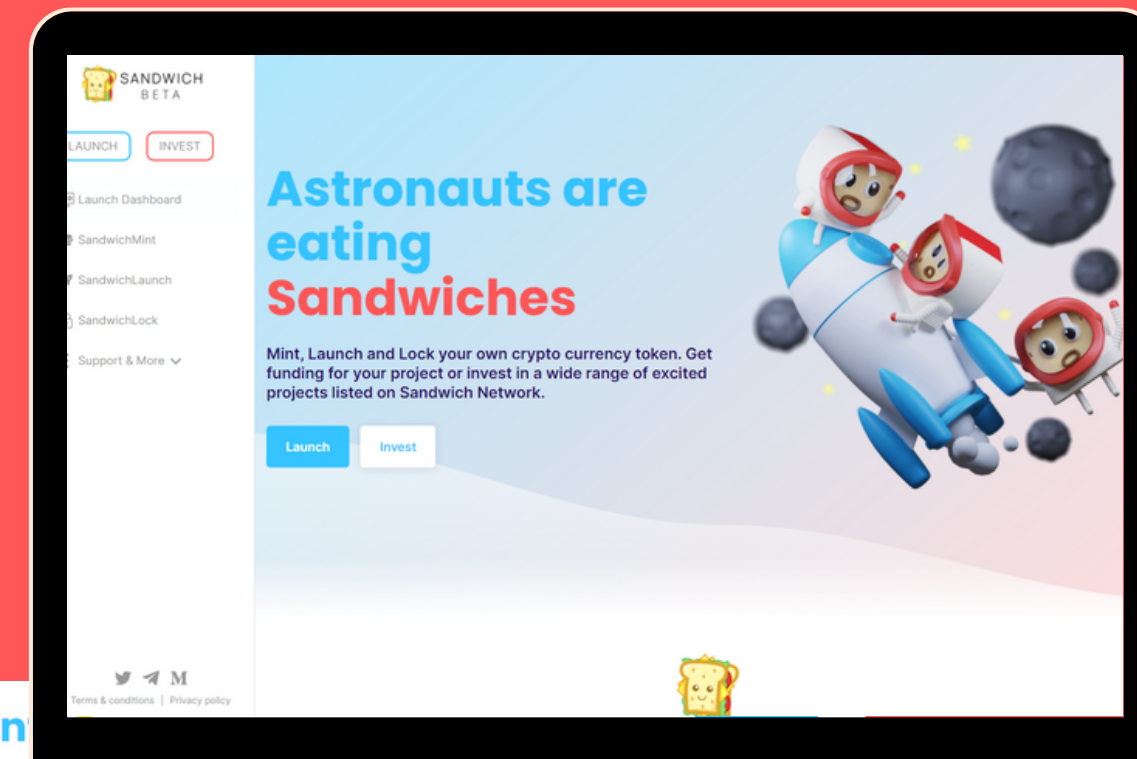

Fragmented market

The current market for investing, launching and tracking crypto currency projects is highly fragmented at this time. For everything you need different tools which can be frustrating but also can lead to mistakes like losing funds or keeping track of investments and holdings.

This could be prevented by providing a central hub with everything an investor or project owner would need.
HIGH-CAP LAUNCHES

LOW-CAP LAUNCHES

TRADING

Market Size

Sandwich Network is a decentralized autonomous organization (DAO) in the DeFi (Decentralized Finance) sector. In June last year, TVL sat at about $1 billion worth of cryptocurrency deposited in DeFi applications. Today, the TVL figure exceeds the $60 billion mark, and it peaked at over $86 billion in mid-May, according to data from DeFi Pulse.

At **Sandwich**, our goal is to be the starting point of new and existing cryptocurrency investors in the world of DeFi by bringing all necessary tools, applications and support to one simple, but extensive place. So everyone can simply start, monitor and scale their cryptocurrency journey.

Ecosystem

SANDWICH Beta

SANDWICH SAFU

SANDWICH Tools

SANDWICH Swap

With **SandwichBeta**, we have created a safe and easy way for project starters to mint a token, host private rounds, launch a presale and lock tokens. Rolling out weekly updates of new token features, trending contracts and new functionalites like whitelisted presale contracts.

Reducing risk in the crypto-space is unfortunately still much needed. With **SandwichSAFU**; a decentralized launchpad with heavy security features we raise the bar for applicants to launch their projects. So projects that tick all boxes for launching on SAFU will automatically get a 'Serious project´ mark.

Aiming to become the one-stop-shop for launches of new crypto projects **SandwichTools** will provide the most extensive toolbox for DEX trading. Analyse and anticipate market movements, statistics and connect personal wallets to track all investments in one place. Available on desktop, tablet, mobile and later IOS/Android.

Bringing all Dapps & tools together and linking it with the native multi-chain DEX trading platform **SandwichSwap**. Launching with all supported chains on SandwichLaunch-, Mint & Lock.

Sandwich Network

CREATORS

INVESTORS

SandwichBeta: Mint a token, launch a presale and lock tokens on various blockchains permissionless.

SandwichSAFU: Host private and public rounds for higher-level projects through a revolutionary platform with automatic KYC procedures. Get incubation through SandwichLabs.

SandwichSwap: Trade DEX tokens.

SandwichTools: Advertise & Check liquidity pool size, trades and all that has to do with the token your team has launched.
SandwichBeta: Participate in presales created on the platform.

SandwichSAFU: Participate in private and public rounds for higher-level projects.

SandwichTools: Check charts for DEX tokens on various chains and dexes. Track real-time value of all your wallets in a comprehensive overview.

SandwichSwap: Trade DEX tokens, participate in lottery and more.

SandwichBeta: Live

SandwichMint

The easiest way to create your own cryptocurrency token. Simply choose the blockchain network you would like to use, follow the steps and you will get your very own token (with total supply) directly distributed to your own wallet.

SandwichLaunch

SandwichLaunch allows anyone to create a presale for their cryptocurrency token. Investors can participate in the presale at a fixed price per token. After completing the presale, Sandwich will automatically create a liquidity pool on Pancakeswap (BSC) or Uniswap (ETH).

SandwichLock

So you launched your token but want to create a safe investment for your community? Use the SandwichLock token locker to lock your team tokens for a certain amount of time.

Business Model

With the growth of the ecosystem, there will be **multiple revenue stream opportunities** that we can take from updates and new Dapps. We will start with the most basic ones:

Flat fees

Flat fees are paid by project creators who use one of Sandwich's services. Standard rates are 0.1 BNB for Minting, Launching and Locking.

Performance fees

Performance fees are percentage-based and depend on success of presales on SandwichLaunch. We earn 2% of raised BNB (ETH/MATIC) and 2% of deposited tokens.

Advertising fees

Generating passive income through the SandwichAds (Stage 2) self-service advertisement app. Extra income will be generated through manual promotion on Sandwich promo channels (Telegram/Twitter).

08 $SANDWICH Token

The **Sandwich Network** ($SANDWICH) is used to power the **Sandwich Ecosystem** as the native token. The token will mainly be used as a utility token on the various applications. Both project starters and investors will have various benefits such as discounts, premium access and liquidity mining. The team will constantly roll out new updates & Dapps with new ways of token utility so the token will become more and more useful over time.

BENEFIT EXAMPLES

Discounts: Holding X+ amount of $SANDWICH will result in using SandwichMint, SandwichLaunch and SandwichLock permanently at a discounted fee of 0.1 BNB.

SandwichSAFU: SandwichSAFU will have a fixed tier system based on the number of $SANDWICH tokens held. Holding more tokens will mean higher pool weight and possible allocation.

SandwichTools: Holding X+ amount of $SANDWICH will result in permanent access to the premium functions of SandwichTools such as wallet-tracking.

Additionally, the **$SANDWICH holders will be able to participate in key governance votes**, such as the development roadmap and new functionalities added to existing applications in the ecosystem.
⑨ $SANDWICH Allocation

Allocation	Tokens	%	Price
Seed sale	80,000,000	8%	$0,012
Private sale	120,000,000	12%	$0,014
Public sale	25,000,000	2,5%	$0,016
Liquidity pool (80%)	20,000,000	2%	
Ecosystem incentives	355,000,000	35,5%

Road Map

Stage 1: Improving BETA & scaling

● Further Development and improvements of the ready Beta Platform. Scale marketing to become the #1 decentralized launchpad on Binance Smart Chain.

● Add following basic functions to the platform: Private sale/whitelist sale, SandwichAirdrop, add multiple chains: Ethereum, Polygon etc.

Stage 2: Expand platform with new Dapps

● **SandwichTools:** Most extensive real-time data analysis and tracking platform for DEX trading.

● **SandwichSAFU:** Decentralized with heavy security features we raise the bar for applicants to launch their projects.

Stage 3: Bringing together the ecosystem

● **SandwichSwap:** Bringing all Dapps & tools together and linking it with the native multi-chain DEX trading platform SandwichSwap.

12

Team

Sandwich Network is established as a DAO (Decentralized Autonomous Organization). The complete ecosystem is permissionless for anyone to use. This means any person with a decentralized wallet (Trustwallet, Metamask) can use all applications in the ecosystem. The team can not be held liable for anything others do with the tools we offer. Therefore the team is not publicly available. However, you can contact the founding team through telegram or email using the credentials below.
